EDUCATION

Vellore Institute of Technology, Vellore Bachelors of Technology in ECE with specialisation in Biomedical, CGPA: 8.62	July 2022 – August 2026 Vellore
DAV Boys Higher Secondary School High School, AISSE - 91.2%	April 2020 – June 2022 Chennai

EXPERIENCE

Aries Technologies Embedded Programming Intern	June 2024 – July 2024 Coimbatore
- Bootstrapped the entire software platform from scratch on a bare STM32MP7 board (Yocto Linux), with no pre-existing BSP or application layer, into a functional prototype. - Built a PyQt-based GUI cross-compiled for embedded deployment, enabling real-time ECG data visualization on-device. - Implemented OpenAMP-based inter-processor communication between the Linux and real-time cores, achieving sub-0.1ms synchronization latency. - Delivered 85% faster data sync compared to the existing baseline approach, establishing the core platform later extended for additional features.	
RC Studios Full-Stack Developer	July 2023 – March 2024 Remote
- Led development of a livestream-focused OTT platform (Next.js, PostgreSQL, Prisma) deployed on Vercel, driving a 350% increase in viewership. - Architected NGINX-based streaming infrastructure in-house, making the company self-reliant and boosting concurrent user capacity 7x over their previous paid streaming service. - Built an admin dashboard for media uploads and studio content management, streamlining internal operations. - Developed and published a companion Flutter app on the Play Store, reaching 500+ active users.	

PROJECTS

Deep Learning Steganography for Secure Medical Imaging	March 2026 – June 2026
- Designed an attention-guided residual encoder-decoder (deep CNN, 112K ChestMNIST X-rays) to embed AES-encrypted patient data into medical images while addressing a gap in prior work: verifiable data integrity. - Built a Merkle-tree hashing layer to cryptographically detect tampering post-transmission. - Outperformed a comparable medical steganography model by 3% PSNR and 12% SSIM, uniquely combining deep learning-based embedding with cryptographic verification.	

SKILLS

Programming Languages: Java, C, Python, JavaScript, SQL	Frameworks: Next.js, Flutter
Developer Tools: Postman, Jupyter Notebooks, Visual Studio Code, Git	Databases: PostgreSQL, MySQL

AWARDS

First Place SPIC Hackathon - (IAC, 2026) ; <u>Farming Forward Hackathon</u> - (GraVITas, 2023)
Runner-up <u>HackWars</u> (Best AI Implementation, 2025); <u>Pixels and Paths</u> (UI/UX Design Competition, 2024)

CERTIFICATIONS

Machine Learning Specialization Stanford University	Data Science IBM
